### **Packaging films**

for innovative, high-quality  
boxes or blister packaging

Smart films for direct use with food that offer outstanding properties for further processing such as printing, punching, and gluing. Nowadays, design is an important focus when it comes to manufacturing high-quality packaging. The raw material and its properties are a crucial framework for producing innovative, high-quality boxes or blister packaging.

Our sustainable films offer you both an ecological alternative to PVC and the ability to expand this framework to a maximum. This gives your creative ideas the space they need to blossom. Optimum processing using all current methods – that is our guarantee for our product. We can provide you with the necessary foodstuffs legislation certificates for our products.

What project do you want to create? We would be happy to help you select the right product for you.

## PET-A film

A cost-effective solution ideally suited to protecting printed substrate materials.

## PET-G film

This high-end solution offers the optimum prerequisites for problem-free processing using current printing methods.

## PET-GAG film

As a smart coextrusion of PET-A and PET-G, this material offers benefits that guarantee optimum processing.

## PET-MPE

The solution where above-average temperature resistance is needed, this special film conforms to requirements even after extended exposure to heat.
