

A PLACE OF PIONEERING SPIRIT

folienwerk
wolfen[®]

We were one of the first plastic processors to use
multilayer technology
 to combine the properties of various polymers in
 a single film.

As a global trading film manufacturer with a keen understanding of environmentally friendly and intelligent product development, we are among the pioneers in the field of high-quality extruded plastic films.

When it comes to the development and production of our plastic films, we have over 50 years of employee know-how to fall back on. As a leading film manufacturer, Folienwerk Wolfen has its own research and development department which allows us to develop tailor-made solutions and make them ready for production in close consultation and cooperation with our partners.

Smart films for direct contact with food, allowing hygienic properties for handling, processing and storage.

Packaging films

Professional printing can be used to achieve stunning effects. We want our films to contribute significantly to helping you make creative and imaginative designs.

Print films

We know that thermoforming is about quality and speed. Through deep-drawing, sealing, or heat sealing – our films create added value to your product packaging.

Forming films

Flexibility, safety, traceability, documentation – important building blocks in gaining trust. We are certified in accordance with ISO 9001 and BRC-IOP in order to fulfil these very requirements.

Medical-device films

We use pin point control of individual film layers to place the right character in the right location on the film. Flexibility and quality consciousness help to perfect our product range. We are now world-renowned for our individualized customer solutions for ID, credit, loyalty, and gift cards.

Card-lamination films

Films made of the copolymer ethylene vinyl acetate (EVA) have a wide range of applications in various fields of external and internal architecture thanks to their excellent resistance to heat and ageing.

Glass-lamination films

Your individual solution

We have developed special films with particular properties that, for example, satisfy specific fire classes or are based on renewable raw materials. For us, sustainability is always the most important issue affecting everything we develop. We are always on the lookout for new challenges. Together with you, we can master them successfully.
